1. The disclosure is objected to because of the following informalities: the related applications are required to be provided and complete on page 1 of the specification.

Appropriate correction is required.

Double Patenting

2. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

3. Claims 1-20 are rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1-20 of prior U.S. Patent No. 6,680,695. This is a double patenting rejection. There is only a slight difference in language and not in scope between the instant application and the patented case. In the instant application, the language "the second data path" is defined for "verifying the incoming signal" while the patent language "the verification" is defined by "a second data path for verifying." Thus, as there is no change in scope, the instant claims claim the same invention as that which is already patented.

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Art Unit: 3662

5. Claims 1-20 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-20 of U.S. Patent No. 6,466,161. Although the conflicting claims are not identical, they are not patentably distinct from each other because someone skilled in the art given the claims of the patent could make and/or use the claimed subject matter of the instant application since "differentiating the incoming GPS signal from an auto-correlated signal" is completely encompassed by "differentiating the incoming GPS signal from an auto-correlated signal and a cross-correlated signal." Claims 16-19 disclose the transceiver in combination with the GPS receiver.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. King et al disclose a real-time correlator and an off-line correlator for a GPS receiver. Davis discloses a combined GPS receiver and cellular transceiver that utilize shared components in order to acquire satellites and determine position.
